

12 Volt Inverter Specifications

Overview

What is a 12V DC power inverter?

This is where a power inverter comes in. Definition and Working Principle A 12V DC power inverter is a device that converts low-voltage direct current (DC) power from a 12V battery (such as a car battery or deep-cycle battery) into 120V alternating current (AC) power, making it suitable for household appliances and electronic devices.

Who makes 12 volt pure sine wave power inverters?

Inverters R Us carries 12 volt pure sine wave power inverters (PSW) manufactured by Aims, COTEK, Go Power, KISAE, Magnum Energy, Outback, Power Bright, Samlex America, Thor, Wagan, and Xantrex. Pure sine inverters are great for medical equipment, digital music amplifiers, higher end televisions, and essential for microwaves and laser printers.

What are inverter specifications?

Specifications provide the values of operating parameters for a given inverter. Common specifications are discussed below. Some or all of the specifications usually appear on the inverter data sheet. Maximum AC output power This is the maximum power the inverter can supply to a load on a steady basis at a specified output voltage.

How much power does an inverter need?

It's important to note what this means: In order for an inverter to put out the rated amount of power, it will need to have a power input that exceeds the output. For example, an inverter with a rated output power of 5,000 W and a peak efficiency of 95% requires an input power of 5,263 W to operate at full power.
