

# 13kw solar inverter

## Overview

---

What is a 13kw Solar System?

13kW solar systems are a great system size for homes with high levels of energy consumption or businesses with small to middling energy needs - provided that they have sufficient roof space to install one.

What is the best solar inverter?

Designed to maximize efficiency and savings, this inverter offers 13kW continuous output (with PV), 18kW maximum solar input, and 10kW battery-only output capability. Whether you're aiming to reduce reliance on the grid or build a powerful off-grid system, the FlexBOSS18 provides the perfect balance of affordability, performance, and versatility.

What is a 10kVA solar inverter?

A 10KVA solar inverter is a device that converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into a utility frequency alternating current (AC). This can be used to feed electricity into a commercial electrical grid or an off-grid electrical network.

Is a 13kw Solar System worth it?

A 13kW solar system usually produces around 40kWh a day. If your home consumes significantly less power than this, then perhaps a smaller solar system may not be worth it for you, such as a 6kW solar system. If you are consuming between 15kWh and 25kWh, then a 10kW solar system may be ideal.
