

24V mobile power box

Overview

How good is the LiFePO4 battery?

The LiFePO4 battery inside is good for 768 watt-hours, and I managed to squeeze a little more out of it in my tests. The ports are great for camping trips, with everything you need to charge small gadgets. Using the X-Boost surge, you can power small appliances, but I wouldn't risk a hair dryer or a UK kettle.

How long does a LiFePO4 battery last?

The LiFePO4 battery should be good for 10 years, and Jackery has various protective mechanisms to reduce the risk of anything going wrong. In my tests, the capacity consistently matched up with Jackery's claims.

What can a portable power station charge?

All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or in the UK, a kettle, you need to be able to draw thousands of watts.

What battery types are most commonly used in portable power stations?

There are various battery technologies, but the main ones used in portable power stations today are types of lithium-ion (Li-ion) batteries, often lithium nickel manganese cobalt oxide (Li-NMC) or lithium iron phosphate (LiFePO4 or LFP).
