Does South America have a photovoltaic solar system?

Just as with EV adoption, photovoltaic solar deployment varies greatly in South America: some countries have just started deploying it, while others have made it a core part of their systems for nearly a decade. But all (or at least most) are advancing rapidly towards its massive deployment.

Will solar be a big deal in South America?

By and large, South American countries are relatively sunny, relatively sparsely populated, and relatively stable, so as solar prices come down, expect solar deployments to increase dramatically even in countries that — for now — have been laggards in this transition. And with solar coming in, fossil fuels will start to go out.

What is a solar panels on shipping container?

It not only transports the PV equipment, but can also be deployed on site. It is based on a 10 - 40 foot shipping container. Efficient hydraulics help get the solar panels ready quickly. Due to its construction, our solar panels on shipping container offers unmatched flexibility and maneuverability.
