

5g base station 3700 watt power supply

Overview

What is Vishay 5G power supply solutions?

Vishay 5G Power Supply Solutions are a portfolio of devices that offer the highest efficiency and RF noise levels for 5G mmWave base station applications. They have a high operating temperature range from -40°C to +125°C.

What is a 5G power supply?

The equipment ensures that devices across the infrastructure stack receive reliable power from the mains network, wherever they happen to reside. With it, individuals and organizations can continue to render services to both themselves and their customers. Overviews The 5G network architecture uses multiple types of power supplies.

What is a 5G backhaul power supply?

The backhaul part of the 5G network connects the access interface - including masts, eNodeB, and cell site gateway - to the mobile core and internet beyond. And just like the access equipment, it too has specific power supply requirements. Backhaul power supplies must cater to aggregation routers and core routers.

How will masts change 5G?

Masts in 5G systems have more control over their own operation instead of being controlled by a central tower. However, these changes mean that power supplies need to evolve. Small cells will need to be able to fit in compact environments, such as traffic lights, utility poles, and rooftops.
