How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

What are 5G mmWave modules used for?

This folded substrate can be used to create 5G mmWave modules that provide wider antenna coverage. This also reduces the number of heat generators. Microwave coaxial switch connectors are very useful for electrical characteristics measurement of microwave circuits in base stations.
