Can a 12V 100Ah battery run a 600 watt inverter?

But for off grid systems, you need to make sure the battery size is commensurate to your power requirements. A 12V 100ah battery can run a fully loaded 600 watt inverter in just under two hours. $600 \text{ watts equals } 50 \text{ amps}$ ($W / V = A$). The load draws 50 amps an hour so it should last two hours.

How long can a 12V battery run a 600W inverter?

Example, the Renogy 200ah 12V AGM battery can run a 600W inverter load for four hours. But again this will be just under that due to inefficiency. If you want to run the load for a full four hours, you need more than 200ah, preferably 225-250ah to offset the inefficiency.
