

## **60W inverter configuration**

## Overview

### How to choose a solar inverter?

To avoid shock hazards, ensure the minimum impedance of the PV string to the ground exceeds  $R$ ,  $R = \text{Max. Input Voltage (V)} / 30\text{mA}$ . Keep the battery of, and the inverter disconnects with PV panels and other AC power before connecting the battery and the inverter. The rated voltage of the battery should meet specifications of the inverter.

### How to install a wireless inverter?

Install the inverter at least 30m far away from the wireless equipment. Add a low pass EMI filter or a multi winding ferrite core to the DC input cable or AC output cable of the inverter. Warning labels on the inverter are as follows. HIGH VOLTAGE HAZARD. Disconnect all incoming power and turn of the product before working on it. Delayed discharge.

### What voltage should a PV inverter use?

Input Voltage (V)/30mA. Keep the battery of, and the inverter disconnects with PV panels and other AC power before connecting the battery and the inverter. The rated voltage of the battery should meet specifications of the inverter. The PV modules used with the inverter must have an IEC61730 class A rating.

### How to properly wire a DC inverter?

Ensure the DC cables are connected tightly, securely, and correctly. Inappropriate wiring may cause poor contacts or high impedances, and damage the inverter. Measure the DC cable using the multimeter to avoid reverse polarity connection. Also, the voltage should be under the max DC input voltage.
