

# **Australian energy storage container prices**

## Overview

---

How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

How much does a container cost in Australia?

Let's compare the prices of new and used equipment now. The cost of a used container depends on the size. Typically, a cargo-worthy 20ft container in Australia can cost you anywhere between US \$1,000 and US \$1,600. And a cargo-worthy 40ft container will cost around US \$1,700. For a cargo-worthy high cube, you're looking at US \$2,500.

Why should you choose a container energy storage system?

Housed in durable shipping containers, our systems are engineered to meet the growing demand for renewable integration, backup power, and off-grid energy supply. Why Choose a Container Energy Storage System?

All-in-One Power Solution – Integrated battery storage, inverter systems, and control units in one secure container.

Why are batteries so expensive in Australia?

Per kilowatt of power, batteries in Australia (in both the NEM and WEM) have increased in cost over time. But this is due to more recent projects being longer-duration: while the first Australian batteries were at one hour of duration or less, two-hour and four-hour batteries are now the norm.

## Australian energy storage container prices
