

# **Automatic Folding Container Type for Catering Industry**

## Overview

---

What is full auto aluminum foil container making machine?

Full Auto Aluminum Foil Container Making Machine The Full Auto Aluminum Foil Container Making Machine is used for manufacturing aluminum foil containers. With automatic foil feeding, auto lubrication, mould forming, and automatic collecting, it offers high precision, fast production speed, and requires fewer operation workers.

What are the features of the automatic foil feeder?

The automatic foil feeder consists of essential features: Precise Stepper Motor: Controls the speed of aluminum foil entering the press with accuracy. Height Adjustment: Allows operators to adjust the entrance height of the foil for proper alignment with the press tool.

How aluminum foil containers are processed?

The processing of aluminum foil containers is completed from cutting, stretching, forming, curling, and finished products at one time, including various sides (G side, L side or IVC, folding side, etc.).

How does aluminum foil container moulding work?

For the aluminum foil container mould, a combination of low-speed wire cutting and high-precision CNC processing methods is employed. This approach guarantees the accuracy of the final products and enhances production speed.
