# Battery BMS System

## Overview

---

How does a BMS work?

Charging currents usually range from 0A to 100A, while discharge currents can reach 2,000A. The current sensing module handles this wide range accurately. Temperature sensors round out the essential components in a complete BMS by watching thermal conditions throughout the battery pack.

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

How do battery management systems work?

Battery management system (BMS) is technology dedicated to the oversight of a battery pack, which is an assembly of battery cells, electrically organized in a row x column matrix configuration to enable delivery of targeted range of voltage and current for a duration of time against expected load scenarios.

What is a multi-master battery management unit (BMS)?

NX-Tech’s BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.
