

Battery energy storage power station location

Overview

The station will be located in Shanghai, adjacent to Tesla's new Megapack manufacturing facility, which began full-scale production in February 2025. What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

Will Tesla build a grid-scale battery energy storage station in China?

Tesla has officially signed a ¥4 billion (C\$764/US\$557 million) deal to build its first grid-scale battery energy storage station in China, leveraging its Megapack technology.

Why is Tesla building a battery storage facility in China?

Tesla's energy expansion in China comes as demand for large-scale battery systems grows. Tesla has signed its first agreement to build a utility-scale battery storage facility in China, marking a major step in the company's global energy ambitions despite ongoing trade tensions between Washington and Beijing.

What are the core functions of energy storage power stations?

In addition to these core functions, functions such as anti-backflow protection, support for parallel/off-grid operation, and islanding protection further enhance the reliability and versatility of energy storage power stations.
