

# Can lithium iron phosphate battery packs with BMS be connected in parallel

## Overview

---

Can I connect lithium iron phosphate (LFP) batteries in parallel?

If you have ever sought information about connecting Lithium Iron Phosphate (LiFePO<sub>4</sub> or LFP) batteries in parallel for your application and been left confused by conflicting information, let me clear the buzz and explain why some sources allow us to connect LFP batteries in parallel and others do not recommend it at all.

Can You charge lithium iron phosphate batteries in parallel?

Combining series and parallel connections allows for customization of the battery pack's energy (Wh) and power (W) density to suit specific needs, such as in electric vehicles or stationary energy storage systems. By following these guidelines, you can effectively charge lithium iron phosphate batteries in parallel.

Can a BMS be used in a parallel connected battery?

No matter the BMS design, because both solid-state-relays and mechanical relays have current limits, the BMS maximum current limits must be respected when designing a parallel connected bank of lithium batteries with built in BMS.

Which LiFePO<sub>4</sub> batteries are suitable for parallel connection applications?

HyXin Factory is committed to providing high-quality and safe LiFePO<sub>4</sub> batteries that are suitable for parallel connection applications. Our batteries are designed and manufactured with the following features:
