## Overview

---

What is solar glass?

Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it to generate power from sunlight. This innovative technology has gained popularity in recent years as a sustainable and efficient way to produce clean energy.

How do solar glass panels work?

This integration not only generates electricity but also serves as functional windows, allowing natural light to pass through while still capturing solar energy. Solar glass panels work on the same principle as traditional solar panels. They are made of photovoltaic (PV) cells that convert sunlight into electricity.

Are solar glass panels sustainable?

By generating clean, renewable energy, solar glass panels contribute to a reduction in greenhouse gas emissions and a smaller carbon footprint. They align perfectly with sustainable energy goals and are an environmentally responsible choice for energy generation.

How does Photovoltaic Glass work?

Photovoltaic glass operates on the same basic principle as any solar system: it converts sunlight into electricity. It uses solar cells made of materials such as amorphous silicon, crystalline silicon, or advanced thin-film technologies. These cells are encapsulated between layers of glass, making the product durable, safe, and functional.
