

Charging piles for industrial and commercial energy storage

Overview

What is a charging pile?

The function of charging piles is like that of tankers in gas stations. Charging piles can be fixed on the ground or wall and installed in public buildings, residential parking lots or public electric car charging stations. They can be used to charge various types of electric cars according to different voltage levels.

What are the different types of charging piles?

Charging piles are mainly divided into AC charging piles and DC charging piles. AC charging piles have a smaller body, are flexible for installation, and typically take 6-8 hours to fully charge. They are suitable for small electric vehicles and are commonly used in public parking lots, large shopping centers, and community garages.

What are electric car charging piles?

Electric car charging piles are fixed on the ground, and they provide AC electric energy for electric cars with on-board chargers by using special charging interface and conduction mode. They have corresponding communication, charging and safety protection functions. Have You Ever Used Portable EV Charging Cable?

.

What is the protection level of indoor and outdoor charging piles?

Indoor charging piles should have a protection level of at least IP32 or above, while outdoor charging piles need to have a protection level of at least IP54 to ensure the safety of human bodies and charging equipment in harsh environments with wind, rain, and the need for better insulation and lightning protection.
