

Cheap and easy-to-use cylindrical lithium iron phosphate battery

Overview

What is lithium iron phosphate battery technology?

Lithium Werks' Lithium Iron Phosphate battery technology offers thermal-stable chemistry, faster charging, consistent output, low capacity loss over time, and superior total cost of ownership (TCO). Based on lithium iron phosphate chemistry (LiFePO₄), the cells are inherently safe over a wide range of temperatures and conditions.

Who makes the safest lithium iron phosphate (LiFePO₄) battery pack?

Keheng, as an LPF Battery Cell manufacturer, produces the safest Lithium Iron Phosphate (LiFePO₄) battery packs, which is the optimal solution for energy storage, power, medical, industrial, and commercial applications with its high safety, long cycle life, and no memory effect.

What is a cylindrical lithium ion battery?

Cylindrical cells are one of the most widely used lithium ion battery shapes due to ease of use and good mechanical stability. The tubular cylindrical shape can withstand high internal pressures without collapsing. Melasta produces multiple sizes and capacities according to the customer requirement.

What is a lithium iron phosphate cathode?

The lithium iron phosphate cathode material enables the seamless use of large-capacity lithium batteries in series. The LiFePO₄ battery operates within a voltage range of 2.8V to 3.65V, with a nominal voltage of 3.2V, and functions effectively across a wide temperature range (-20°C to +75°C).
