

# **Communication tower integrated base station**

## Overview

---

It integrates the tower body, shelter and foundation, adopts the currently popular international industrial standard design and production mode, and pre-integrates the integrated wiring, communication transmission and receiving equipment, air conditioning, insulation, lighting, monitoring, feeder window, lightning protection, fire protection, anti-corrosion and other base station equipment and facilities. What is a communication base station?

Communication base station setups will usually include a wide array of different technologies, including power supplies, data servers, head end, radio repeaters, and communication systems that allow for high-speed continuous information flow. It can also be used as part of a leaky feeder system in the communication network.

What is a passive is-integrated base station?

In particular, integrating passive IS into the base station (BS) is a novel solution to enhance the wireless network throughput and coverage, both cost-effectively and energy-efficiently. In this article, we provide an overview of IS-integrated BSs for wireless networks.

What is a single tube tower?

Single tube tower also called monopole tower, is a commonly used type, with beautiful appearance, covering an small area of 9 to 18 square meter, cost-effective, and is adopted by majority of the construction. Tower body adopt more reasonable section, which is connected through high strength bolt. It has the

## Communication tower integrated base station
