

Czech solar panels power generation

Overview

The Czech Republic has nearly doubled its solar power generation over the past five years, rising from 2.3 terawatt-hours in 2019 to 4 terawatt-hours in 2024. What is solar energy in Czech Republic?

Solar energy is the radiation the Sun emits that can create heat, trigger chemical reactions, or create electricity. The total solar energy incident on Earth is far greater than the global energy needs at the moment and in the future. The report offers the market size and forecasts for Czech Republic solar energy in installed capacity (MW).

How much solar power does the Czech Republic have in 2021?

In 2021, the Czech Republic will have a solar installed capacity of around 2119 MW, with a renewable energy capacity of around 4415 MW. Czech Republic's renewable energy shares around 21.1% of the total electricity generation in the country.

Why is solar energy so unpopular in the Czech Republic?

Solar energy has long been unpopular among Czech politicians since high compensation led to an uncontrolled boom in solar in 2009-2010, costing around 1.8 billion of euros in subsidies per year to the sector split between consumers and the government. The bill also raises special taxes paid by solar plants built in 2009-2010.

Why is electricity important in the Czech Republic?

Electricity plays a vital role as a factor in economic growth and social welfare, in so it is essential to have an accessible, reliable, and sustainable form of energy. In 2021, the Czech Republic will have a solar installed capacity of around 2119 MW, with a renewable energy capacity of around 4415 MW.
