

Djibouti Energy Storage Power Generation

Overview

How can Djibouti achieve its energy goals?

Djibouti's substantial potential for geothermal electricity generation, along with its rising capacity to produce energy from wind and solar power plants, should help the country reach its goals in coming years. In addition to the growing need for generation capacity, the expansion of renewable energy is key for Djibouti to diversify its economy.

Does Djibouti have solar energy?

Djibouti has significant solar energy potential, with an estimated average daily global horizontal irradiance of 4.5 to 7.3 KWh per sq metre across its territory. The construction of the first large-scale solar generation project began in November 2022 in the Gran Bara Desert, which is located in the country's southern region.

Why is Djibouti constructing a solar farm?

Djibouti's \$390 million solar farm is under construction in southern Djibouti as a result of a public-private partnership between Djibouti's Ministry of Energy and Natural Resources and Green Enesys, a German renewable energy firm. Construction began in 2018 after \$50 million in funding was secured by the World Bank and other financiers.

How much electricity does Djibouti produce in 2021?

Djibouti produced 654,062 MWh of electricity in 2021, according to figures from the Central Bank of Djibouti, representing a 4.3% increase relative to 2020. Improving domestic energy production will require the government to direct private investment towards electricity generation.
