

# **Dual-stage grid-connected inverter**

## Overview

---

What is a two-stage grid-connected inverter for photovoltaic (PV) systems?

In this study, a two-stage grid-connected inverter is proposed for photovoltaic (PV) systems. The proposed system consist of a single-ended primary-inductor converter (SEPIC) converter which tracks the maximum power point of the PV system and a three-phase voltage source inverter (VSI) with LCL filter to export the PV supplied energy to the grid.

How does a grid connected dual-stage inverter work?

In the proposed grid-connected dual-stage inverter, the direct axis current,  $I_d$ , is observed, which serves for the inverter stage to set  $V_{dc}$ . These actions define the DC-DC converter's input characteristic behavior, which determines the PV array operation point . When  $I_d$  is maximized, the PV array operates on MPOP.

Can a modified dual-stage inverter be used for grid-connected photovoltaic systems?

In this paper, a modified dual-stage inverter applied to grid-connected photovoltaic systems performed for high power applications has been studied. The modified dual-stage inverter contains DC-DC stage and DC-AC stage.

What is a dual-stage inverter?

The modified dual-stage inverter contains DC-DC stage and DC-AC stage. Through the Behavior Matching, the DC-DC stage operates with constant frequency and duty cycle and the DC-AC stage becomes responsible for the maximum power point tracking and grid-current control.
