# EK Batteries BMS Ireland

## Overview

---

What is a battery management system (BMS)?

This device manages a real-time control of each battery cell, communicates with external devices, manages SOC calculation, measures temperature and voltage, etc. (see key features on the right bar). The choice of BMS determines the quality and lifespan of the final battery pack.

What is the difference between a battery balancer and a BMS?

A BMS controls and monitors your whole battery on cell level niveau, disconnects the whole battery in case of over or under voltage and prolongs the life of your precious battery. An active balancer just balances your batteries, shovels energy from a cell with higher voltage to one with lower voltage.

Why should you choose a BMS-Matrix® battery pack?

The choice of BMS determines the quality and lifespan of the final battery pack. Our BMS-Matrix® technology is a totally modular BMS solution, allowing you to build a very large capacity or power battery from unit “energy bricks”.

Who are smart battery energy storage systems?

We Group stands at the forefront of Smart Battery Energy Storage Systems (Smart BESS), offering a comprehensive range of products and services catering to diverse sectors. Our industrial and commercial BESS solutions encompass a wide array of capacities, designed to power large-scale operations and guarantee uninterrupted energy supply.
