What are the different types of energy contracts in the Netherlands?

Energy contracts in The Netherlands distinguish between three different types of energy prices: fixed, variable, and dynamic energy prices. With a fixed energy contract, the prices for electricity and/or gas remain fixed for a set period. This period can be for six months, one year, three years, or five years.

What type of energy does the Netherlands use?

The Netherlands primarily relies on natural gas, wind energy, and biomass for its electricity generation. Natural gas stands out as the predominant source, contributing significantly to the country's energy mix.

How does electricity pricing work in the Netherlands?

Electricity pricing in the Netherlands is made up of three major components: Energy Supply Costs – The actual cost of electricity, determined by wholesale market rates and supplier margins. This accounts for about 40% of a typical household bill. Grid Fees – Regulated charges for using the transmission and distribution network.

What are dynamic energy prices?

Dynamic energy prices are tied to the spot market (also known as the “day ahead market”). This means that electricity prices vary hourly, and gas prices vary daily. You will know the prices for the next day around 3:00 PM each day.
