

# **Energy Storage Company Investment Management Plan**

## Overview

---

Why should you invest in energy transition assets?

Investments in energy transition assets are at the heart of this transformation, blending innovation, pragmatism and policy-driven strategies to meet the growing demand for cleaner energy. But these investments are not only about clean energy — the transition needs to progress without compromising energy security, reliability or affordability.

What areas of investment should energy companies invest in?

Other significant areas of investment include renewable and low-carbon energy (55 percent, and energy storage and grid infrastructure (54 percent). Again, these categories cover several methods and technologies, and energy companies appear to be aware of the need to capitalize on many opportunities in parallel.

How can the private sector benefit from the energy transition?

The private sector can benefit from aligning closely with government shifts towards energy independence. For businesses, embracing the energy transition provides more than a social license to operate. It is also an opportunity to build long-term business resilience, new partnerships and competitive advantages.

What is the biggest barrier to investments in the energy transition?

Plus, regulatory or policy risks are also cited as the biggest barrier to investments in the energy transition. This dichotomy — where policy is both enabler and obstacle, both opportunity and risk — highlights the policy-driven nature of the energy transition.
