Estonia Wind Energy Storage Project

Overview

Why is Estonia a good choice for a shore wind project?

Estonia's efficient business ecosystem, coupled with our strategic geographic location, has made us a preferred choice for companies seeking to venture into offshore wind projects. With an eye toward the future, Estonia has set an ambitious target to produce 100% of our electricity from renewable resources by 2030.

When will Estonia start a wind farm?

Upon successful completion of the preparation phase, the wind farm should start energy production before 2030 and with its 1-gigawatt production capacity, it would cover half of the electricity consumed in Estonia. The second offshore wind farm being developed by Enefit Green is in the North-West of Estonia, near the island of Hiiumaa.

Will Estonia produce 100% of our electricity by 2030?

With an eye toward the future, Estonia has set an ambitious target to produce 100% of our electricity from renewable resources by 2030. The timely initiatives of the Estonian government, simplified permit granting processes, and proactive support for offshore wind farms reflect our commitment to accelerating the energy transition.

Is Enefit Green developing a wind farm in the Baltic Sea?

Enefit Green is actively developing offshore wind farms in the Baltic Sea basin. One of the two offshore wind farms that Enefit Green is currently developing - Liivi offshore wind farm located in the Gulf of Riga - plays a key role in Estonia's energy supply and is in line with the government's goals of green transition set for 2030.

Estonia Wind Energy Storage Project

[Solar Energy, Battery Storage Projects For Estonia](#)

Mar 12, 2025 · Storage solutions help stabilize the grid, reduce price fluctuations, and make renewable energy more accessible to consumers," said Klaus Pilar, Sunly's country manager ...
