

French high frequency inverter device

Overview

Who makes frequency inverters?

ZIEHL-ABEGG develops and supplies carefully tuned frequency inverters for ventilation systems and frequency inverters for elevator drives. What does a frequency inverter do?

.

What is a high-frequency inverter circuit?

A high-frequency inverter circuit is a combination of a low-frequency power inverter circuit and RF power amplifier circuit, so, drawing on various types of switching mode power amplifiers in RF circuits to be applied to the WPT system is a very sensible choice.

What is a frequency inverter?

Frequency inverters are electronic devices that create an AC voltage with variable frequency from an AC voltage with fixed frequency (e.g. 50 Hz). They are usually installed between the supply network and an electric motor so that its speed can be controlled steplessly and precisely and so that its energy consumption can be optimised.

Are there high-frequency inverters for WPT systems?

This paper reviews the high-frequency inverters for WPT systems, summarizes the derived topologies based on power amplifiers and H-bridge inverters, investigates the main factors restricting the development of high-frequency inverters, and analyzes the research directions for future development. 1. Introduction
