

Frequency modulation of solar container lithium battery for energy storage

Overview

In this paper, the integrated design of primary frequency modulation of lithium-ion energy storage power station is studied, including the analysis and optimization of response time and overload capacity. Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit $|\Delta f_m|$ is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation $|\Delta f_m|$ is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Can MATLAB/Simulink verify a thermal power unit primary frequency modulation model?

Model verification A previous article based on theoretical research built a hybrid energy storage system-assisted thermal power unit primary frequency modulation model in MATLAB/Simulink. The rated power of the thermal power unit is 600 MW, and the relevant parameters are per unit value .
