

# **Home network UPS uninterruptible power supply configuration**

## Overview

---

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supplies (UPS) are installed for mitigating risks to critical infrastructure and to protect business continuity during a power outage.

Do you need an ups?

Recommendations for improved reliability In traditional power designs, you may have one UPS supporting your servers, switches and storage devices. In this type of environment, you are prone to having to shut down your equipment during a power failure, UPS maintenance or UPS replacement.

Why do I need an ups?

Many UPS models continually condition incoming power as well. Preventing data loss and corruption. Without a UPS, devices that are subjected to a hard system shutdown can lose data completely or have it corrupted. In conjunction with power management software, a UPS can facilitate a graceful system shutdown.

What is a capacity UPS system?

A capacity or 'N' system is the most common type of UPS installation and the minimum requirement to provide power protection to the critical load. Also referred to as 'power parallel', It comprises a single standalone UPS module or a paralleled set of modules with a matched capacity to the critical load projection.
