How big of an inverter should I use for 12v2700w

Overview

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

How do I choose a rated inverter?

You must consider this to select an appropriately rated inverter. A straightforward method to calculate inverter size is: $\text{Inverter Size (VA)} = \text{Total Wattage (W)} / \text{Power Factor (0.7-0.8)}$ Once calculated, choose the next standard inverter size above your result to ensure safe and efficient operation.

How much power does a 12V inverter use?

Standard 12v models top out around 3000w (24v/48v ~ 4000w). To proceed: Upgrade to a higher-voltage system (24 V/48 V) for a larger inverter. Consider a higher-voltage system for a bigger inverter. Pick your appliances. Use the dropdown to add common devices—or enter your own custom items.
