# How long does it take for solar glass to recover after cold repair

## Overview

---

Can glass-glass PV modules be repaired?

Testing of experimental glass repair technique for glass-glass PV modules. After damp-heat test repaired modules showed no signs of water ingress. Economic and ecological feasibility shown using Cost Priority Number metric. Solar photovoltaic (PV) energy is a crucial supply technology in the envisioned renewable energy system.

Does glass defect reparation damage PV cells?

Furthermore, the research analyzed the economic and energetic impact of glass defect reparation in comparison with regular substitution. We found that glass-glass PV modules which endured glass defects did not show performance loss, nor internal damage to the PV cells.

Are repaired glass layers insulating again?

The absence of water-instigated degradation indicates that repaired glass layers are insulating again. However, definite conclusions must be made with caution since the non-repaired PV modules did not show visual signs of water ingress either.

Can PV modules survive a glass defect?

However, glass defects do not directly imply that PV modules endure internal damage nor that PV modules cannot continue to operate with minimal microcracks. Thus far, glass defects have been regarded as a failure beyond repair and no noticeable attempt has been made to develop reparation methods.
