How many kW is 50A at 230V?

Three-phase systems use line-to-line or line-to-neutral voltages, and power is distributed across three phases. This requires multiplying by  $\sqrt{3}$  (1.732) to account for phase balancing in the formula. How many kW is 50A at 230V in a single-phase system?

Using the formula:  $kW = 230V \times 50A \times 0.9 / 1000 = 10350 / 1000 = 10.35kW$ .
