

How many panels should I use for a 5 watt solar panel

Overview

Expect 8–13 panels in most cases. Add space and sunlight checks to be sure. Batteries optional—your 5kW solar inverter works fine without them. How many solar panels do I need for a 5kW system?

If you are using only 400-watt solar panels, you will need 13 400-watt solar panels for a 5kW solar system (13×400 watts is actually 5200 watts, so this is a 5.2kW system). Quite simple, right?

You can also mix solar panels with different wattages.

How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings — not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.

How many kW solar panels do I Need?

As we calculated earlier, the California household needs a 7.2 kW system to cover its electricity needs. A comparable household in Massachusetts needs a 9.9 kW system. So, in less sunny areas like Massachusetts, you might consider choosing highly efficient solar panels to maximize your energy output per square foot.

Can you mix solar panels with different wattages?

You can also mix solar panels with different wattages. Example: For a 10 kW solar system, you can use 33 300-watt PV panels (9900 watts) + 1 100-watt solar panel to bring the total up to 10,000 watts or 10kW solar system. This is a 10kW solar system.
