How to connect the backup power supply for a base station power outage

Overview

How do I build a home battery backup system?

The first step to building your own home battery backup system is to determine how much power you need to run your essential appliances and devices during a power outage. This will help you decide how many and what size of batteries and inverter you need for your backup system.

What does a base hub do during a power outage?

During a power outage, the Base hub disconnects your home from the grid. This ensures that the stored energy in your battery powers only your household. Learn more about the components of your battery system below, in the section "What's inside your Base battery system." The average power outage in Texas lasts 2.5 hours.

Why do you need a home battery backup system?

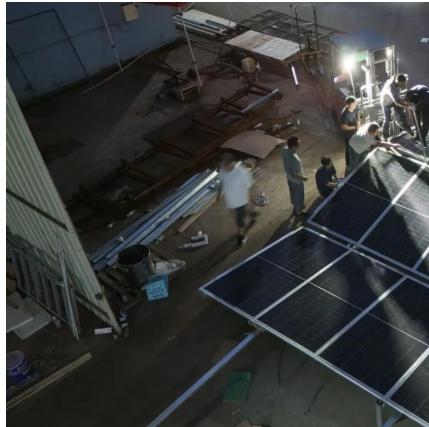

Power outages can be unpredictable and disruptive. Whether it's due to severe weather, grid failure, or local issues, being without power can cause significant inconvenience. A DIY home battery backup system offers an affordable, sustainable solution to keep your essential appliances running when the grid goes down.
