

LLSE CONTAINERS

# How to make a generator container

## Overview

---

### How to build a generator enclosure?

The first step is always to have a sketch of what you want the generator to look like. Any enclosure you build will differ in size depending on the dimensions and build of your generator. In the process, you need to pinpoint the exact features of the generators carefully. Also, you would be able to determine how much material you need for the job.

### How do you build a generator box?

1. Measure Your Generator (Add Clearance) Start by measuring the height, width, and depth of your generator. Then add at least 3 inches on all sides for airflow and maneuvering room. Don't skip this step—tight boxes = overheating.
2. Build the Frame Use your 2x2 or 2x4s to build a simple box frame. I recommend:
3. Attach Plywood Panels.

### How do I build a generator?

Use these tips to learn how to build a generator. Acquire an engine. The required engine size is dependent on the amount of power that the generator will need to supply. A good rule of thumb for a useful, compact generator is to choose an engine in the range of 5 to 10 horsepower.

### What do you need for a portable generator enclosure?

Here's what you'll need for a basic weather-resistant enclosure for a portable generator: Optional upgrades: sound insulation board, castor wheels for mobility, or a temperature-triggered exhaust fan Looking for premade options?
