

Installation of solar panels on the factory building

Overview

Can solar panels be installed on a factory roof?

The roofs of factories are often the ideal place to install solar panels. As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it.

How do industrial rooftop solar panels work?

In short, a solar system for factories transforms underused industrial rooftops into active revenue-saving resources, delivering both financial and environmental returns. To fully understand how solar panels work in industry, it's essential to break down the key components of a typical industrial rooftop solar system.

Where can a solar system be installed?

These systems are typically installed on the rooftops of production plants, fabrication units, or CNC machining workshops. A standard solar system for factories can range from 100 kW to several megawatts, depending on the site's connected load and power usage patterns.

How much space do industrial solar panels need?

Depending on the efficiency of the panels, 4-5 acres of open land or 10,000+ sq. ft. of rooftop space are typically required. Q2: Is net metering available for industrial solar?
