

# **Inverter for solar power station**

## Overview

---

What does a solar inverter do?

First, let's clarify the role of an inverter. Solar panels generate DC power, while household appliances operate on AC power, as supplied by the electricity grid. The primary role of a solar inverter is to convert DC solar power to AC power.

What is a photovoltaic inverter (PVI) station?

It is based on the same best-in-class power conversion platform as our AMPS solutions, enabling greater scalability and flexibility. Hitachi Energy's Photovoltaic Inverter (PVI) station provides you with advanced control and power capabilities that are designed to meet complex technical requirements and the most challenging grid codes.

How many inverters does a solar power station have?

Equipped with everything necessary This power station is supplied totally equipped with several high-efficiency PV inverters, the LV/MV transformer, MV switchgear and LV switchgear. It can be equipped with up to two dual inverters, in both 1,000Vdc and 1,500Vdc topologies, so it covers a very wide output power range.

Which inverter is best for a medium voltage power station?

The Sunny Central UP is our most powerful inverter with up to 4600 kVA and is the heart of the Medium Voltage Power Station. At a voltage of 1500 V DC it allows for significantly higher efficiency in system design. With a variety of options and the new DC-coupling readiness it provides maximum flexibility at minimum size.
