

Ireland Compressed Air Energy Storage Power Generation

Overview

'Project-CAES Larne, NI', as the project has come to be known, will be the second power station constructed in Europe that has the capability to store energy as compressed air in caverns created within geological salt layers at depths of 600m to 800m below ground. What is compressed air energy storage (CAES)?

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation.

Could new energy storage solutions be the future of Ireland?

Significant research and development is ongoing across the world on the development of new energy storage solutions and they could prove an ideal solution for the all-island Irish market, improving energy sustainability and security, while also facilitating achievement of long-term decarbonisation goals.

Can compressed air energy storage improve the profitability of existing power plants?

Linden Svd, Patel M. New compressed air energy storage concept improves the profitability of existing simple cycle, combined cycle, wind energy, and landfill gas power plants. In: Proceedings of ASME Turbo Expo 2004: Power for Land, Sea, and Air; 2004 Jun 14–17; Vienna, Austria. ASME; 2004. p. 103–10. F. He, Y. Xu, X. Zhang, C. Liu, H. Chen.

What happened to Gaelectric energy storage?

Gaelectric Energy Storage company, which administrated this project, withdrew its planning application . The Israeli technology company—Augwind, founded in 2012, announced that a small-scale air-battery energy storage pilot was almost completed in the Arava Desert, Israel.
