Italy Emergency Command Solar-Powered Wind-Resistant Container

Overview

Energy access and use is a cross-cutting issue in humanitarian action. Nevertheless, there is no cohesive and integrated approach amongst different clusters of actions in achieving sustainability and.

What is a solar-powered emergency shelter?

The prototype is the first solar-powered, reusable, versatile, safe, affordable, and energy-efficient emergency shelter integrating passive design, energy storage, and combined DC/AC power system.

Can solar power improve energy resilience in emergency buildings?

In recent years, more work has been done that utilises solar power in achieving energy resilience in emergency buildings. Liu Chang combined solar cells with the envelope structure, while Kalpana et al. designed and utilised solar power generation systems to build small shelters with a resilient energy supply.

Can sustainability and energy resilience be integrated into post-disaster shelter design?

Given the interdisciplinary nature of achieving energy resilience in humanitarian settings, this case study of BBBC showcases the contextualised approach of research in action and how sustainability and energy resilience considerations can be integrated into the design, construction and operational phases of post-disaster shelter contexts.

Should energy services be integrated in humanitarian shelter and settlement design?

This underscores the need to integrate energy services in humanitarian shelter and settlement design to support relief efforts and safeguard the health of the affected communities over the disaster response timeline and across differing contexts of inhabitants' needs and wants from their shelter (discussed further in section 4.4.4).
