Micro base station communication

Overview

What is a 5G O-ran micro-cell base station?

Unlike the small cell product development currently predominant in Taiwan's network communication industry, this 5G O-RAN micro-cell base station system overcomes challenges including heat dissipation, signal distortion, and beamforming.

Why is Itri developing a micro-cell base station system?

Demand is surging for 5G upgrades in emerging markets, network deployment in rural areas, urban hotspot expansion, and private network extension to large venues such as airports, seaports, and hospitals. To address these needs, ITRI has developed Taiwan's first independent micro-cell base station system.

How can a millimeter-wave base station improve real-time information transmission?

Finally, the proposed metasurfaces help the millimeter-wave base station to realize real-time information transmission of multi-users with different directions in a realistic indoor scenario. The experimental results demonstrate that the new beamforming base station system can intelligently enhance or attenuate signals in specific target areas.

What is Taiwan's first independent micro-cell base station system?

To address these needs, ITRI has developed Taiwan's first independent micro-cell base station system. This system incorporates key technologies such as massive multiple-input multiple-output (Massive MIMO) modules and high-power modules and control.
