What is an uninterruptible power supply?

Every UPS has: The word "uninterruptible" means that the power supply will act quickly enough to prevent the gear from ever losing power when the main power source goes dark. This means that a UPS system must be capable of activating backup power within 25ms of a power loss. A UPS, which by its very nature is redundant.

How do I access the parameters of an uninterruptible power supply?

The easiest way to gain access to the parameters of uninterruptible power supplies (UPS / UPS brands APC, Powercom and others) is to use the modern USB or outdated COM interfaces. The UPS is connected to the monitoring computer with a cable and is usually monitored and configured through the proprietary software.

What is ups monitoring?

UPS monitoring is the process of monitoring the different metrics of UPS devices in a network, including voltage, current, battery status, and charge, so they are always up, available, and working. Monitoring critical performance metrics is crucial for maintenance, uptime, and to upgrade your power system to handle extended outages.

Why do you need a ups monitor?

A UPS monitor can protect against power outages and surges, making it an essential part of keeping your systems safe. UPS monitoring tools also help you monitor the battery performance and to check the battery charging status so that you're prepared for any upcoming challenges beforehand. A UPS monitor is an important tool for computer users.
