Exhibiting exceptional energy density and capacity, lithium-rich manganese-based layered oxide (LLOs) cathode materials have garnered considerable attention and are emerging as strong contenders for future lithium-ion battery systems.

What are lithium-rich manganese-based layered oxides (lrmhos)?

Lithium-rich manganese-based layered oxides (LRMOs) have the advantages of a high specific capacity, a high working voltage, and low cost, making them promising candidates for the cathode materials of next-generation high-energy lithium-ion batteries.

Why are lithium-rich manganese-based layered oxides (lmlo) cathodes gaining attention?

In order to continuously improve energy density and reduce costs, Lithium-rich manganese-based layered oxides (LMLO) cathodes are receiving increasing attention due to their high discharge capacity and low cost.

Can lithium-rich manganese-based oxide be used as a cathode material?

In the 1990 s, Thackeray et al. first reported the utilization of lithium-rich manganese-based oxide $\text{Li}_{2-x}\text{MnO}_{3-x/2}$ as a cathode material for lithium-ion batteries . Since then, numerous researchers have delved into the intricate structure of lithium-rich manganese-based materials.
