

# Parallel solar panels

## Overview

---

In this guide, we'll walk you through how to connect solar panels in parallel, including wiring diagrams, safety tips, and key technical insights. How to wire solar panels in parallel or series?

Connect the negative terminal of the first panel and the positive terminal of the second panel and connect to the corresponding terminals in solar regulator's input. The solar regulator will detect the panels and start to charge the battery during sunlight. Wiring solar panels in parallel or series doesn't have to be an either/or proposition.

Should I wire solar panels in series or parallel?

Two solar panels can be connected to one battery in series or parallel. Connecting in series will build up the voltage, while parallel will build up the current. If you wire in series, you require a smaller sized wire than parallel. Continue reading to find out 'how to wire solar panels in series'.

What are the best solar PV panels?

Canadian Solar have a vast wealth of experience which shows in their solar pv range. The 380W Canadian Solar Perc panels feature High Density Mono-crystalline cells that operate at a peak efficiency of 20.5%. With high efficiency, good build quality and long warranties - these solar pv panels have become one of our most popular choices.
