

Photovoltaic Energy Storage Container Long-Term Model 2026

Overview

Will global storage capacity expand by 56% in 2026?

Global installed storage capacity is forecast to expand by 56% in the next five years to reach over 270 GW by 2026. The main driver is the increasing need for system flexibility and storage around the world to fully utilise and integrate larger shares of variable renewable energy (VRE) into power systems. IEA. How will global electricity storage capacity grow in 2026?

Addressing global electricity storage capabilities, our forecast expects them to increase by 40% to reach almost 12 TWh in 2026, with PSH accounting for almost all of it. India dominates storage capability expansion by commissioning over 2.5 TWh (80% of the expansion) thanks to projects using existing large reservoirs.

How big will electrochemical energy storage be by 2027?

Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach 1138.9GWh by 2027, with a CAGR of 61% between 2021 and 2027, which is twice as high as that of the energy storage industry as a whole (Figure 3).

Why should you attend the 2026 energy storage Expo?

The 2026 edition will place stronger emphasis on energy storage technologies, ensuring better alignment between buyers' needs and suppliers' solutions. (See appendix for the full list of exhibiting categories.) –Top-tier exhibitors on site Industry leaders and globally recognized brands will be present, including:
