

Polish Communication BESS Power Station

Overview

Is Poland moving towards battery energy storage systems (Bess)?

As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

What is Bess & how will it impact Poland?

This is where BESS come into play. These systems are becoming the foundation of a modern, resilient and on-demand energy sector. BESS will support the transformation of Poland's energy mix - from fossil fuels to innovative renewable technologies, including wind farms, solar power, and future-oriented hybrid energy parks combining all three.

Is the Polish capacity market a good source of revenue for Bess?

Until recently, the Polish capacity market provided a very attractive source of stable revenues for BESS, offering 17-year contracts. This translated into investors interest, resulting in more than 4 GW being contracted in auctions to date.

How can Bess improve the stability of the national power system?

This is more than technology - it's a real contribution to the green energy transition and to improving the stability of the national power system. Although renewable energy sources are developing rapidly, their dependence on weather conditions still poses a serious challenge to the stability of the power system. This is where BESS come into play.
