

Price of BESS energy storage

Overview

How much energy storage does Bess have?

Including all energy storage, its total installed capacity is now 137GW, meaning that 'new energy storage', mostly BESS, now exceeds its pumped hydro capacity. That is thanks to 43.7GW/109.8GWh of 'new energy storage' that was installed in 2024, CNESA said.

How much does a Bess battery cost?

As of 2024, the average price for a utility-scale BESS is approximately \$148/kWh ¹. For a 1 GWh system, this translates to \$148 million. It's important to note that this cost includes not just the batteries themselves, but also the inverters, control systems, and other balance of system components.

How much does a Bess system cost?

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

What is a battery energy storage system (BESS)?

BESS stands for Battery Energy Storage Systems, which store energy generated from renewable sources like solar or wind. The stored energy can then be used when demand is high, ensuring a stable and reliable energy supply.
