## Price of solar panel stand

## Overview

---

How much does a solar panel stand cost?

If you make a purchase after clicking on one, at no extra cost to you I may earn a small commission. I recently built a DIY solar panel stand that cost me just \$11. That's an insane deal. Store-bought solar panel stands and mounts regularly cost five times as much. What's more, this homemade stand is adjustable, portable, and easy to build.

What is a solar panel stand?

The perfect stand for laying out in the grass or mounting permanently. These stands are fully adjustable and come with all the necessary hardware! They provide everything you need to get up and running, all at once helping the environment too! Even better, our solar panel stands are adjustable which means it can be placed on any surface.

How much does a solar panel stand weigh?

This DIY solar panel stand is very lightweight. It weighs right about 15lbs without the solar panels attached. The flexible solar panels I use weigh 4lbs each. The panels and the mounting rack together weigh a total of 35lbs which is easily picked up and moved around wherever I need it.

How many solar panels can the stand hold?

The stand is designed to be strong and steady, with minimal material used. It can hold four solar panels at once. You can make it from 1/2" plywood, a 1" x1/2" back brace, and a 1/2 "x1/2" front brace to hold the panels in place.
