Reset circuit breaker factory in Oman

Overview

How do you turn off a breaker?

Never touch the breaker panel with both hands at once. Turn off every breaker one by one. Use your thumb and index finger to flip the top left breaker switch all the way to the "off" side, then work your way down to the switch below it and so forth. Keep going until you have flipped every switch to the "off" position.

Where is the main breaker located?

Locate the main breaker near the electric meter if it's not in the panel. The main breaker is often at the very bottom of the breaker panel and labeled. However, in some cases, it may be located in another panel near the electric meter on the outside of your house.

How do you open a breaker panel?

Open the breaker panel lid with one hand. Never touch the breaker panel with two hands at once, or you could create a circuit with your body that allows current to pass through. Instead, reach out with just your dominant hand and release the latch on the breaker panel lid.

How do you turn a breaker switch back on?

Most breaker switches won't allow you to turn them back on until they have been completely shut off. Grip the switch with the thumb and index finger of one hand and flip it all the way to the "off" side. Remember, do not touch the panel with both hands at once.
