

# **Residents install solar panels on their roofs**

## Overview

---

Should you put solar panels on the roof of a house?

The roof of a house offers the most unobstructed access to sunlight throughout the day. By placing solar panels on the roof of a house, homeowners can ensure that the panels receive the maximum amount of sunlight possible, which is essential for optimal energy production.

Where should solar panels be installed?

Many roofs face directly south (in the northern hemisphere), which provides the best angle for solar panels to absorb sunlight. Roofs with a clear, open view of the sky—without large trees, buildings, or other obstructions—are the most suitable for solar panel installation. 2. Unused Space for Efficient Energy Production.

How to install solar panels on the roof?

Here is a stepwise description of how to install solar panels on the roof: Solar rooftop panels are installed using solar mounts. Identifying the area for solar panel installation helps determine how many solar mounts you need. Also, while identifying the total rooftop area, you can specify the extent of shade-free area.

How to choose a solar roof?

Solar rooftop panels are installed using solar mounts. Identifying the area for solar panel installation helps determine how many solar mounts you need. Also, while identifying the total rooftop area, you can specify the extent of shade-free area. Ascertain the endurance capacity of the roof, as the solar panels are bound to weigh heavy on it.
