

# Should I use 6 or 7 strings for solar container outdoor power

## Overview

---

What is a solar string harness?

As the world increasingly turns to renewable energy, solar power has emerged as a cornerstone of sustainable electricity generation. At the heart of any efficient and safe solar photovoltaic (PV) system lies the PV string harness, a critical component also known as a solar PV harness, PV wire harness, PV harness cable, or solar PV harness cable.

Why is solar string sizing important?

Check your internet and refresh this page. If that doesn't work, contact us. Solar string sizing is key to efficient solar PV production, happy solar inverters, and a durable, high-performing system.

What is a solar PV string?

A solar PV string is a series of solar panels connected in a sequence to form a circuit. The panels in a string are connected by their positive and negative terminals, creating a single path for the electric current. The number of panels you can have on a string depends on several factors, including:.

How many strings can be connected to a solar inverter?

Here are the results we calculated: This inverter has 2 MPPT trackers, so a total of 2 strings can be connected to the inverter. We know that there can only be 13 modules maximum installed. We can have one MPPT with 6 modules in a string and the other at 7 modules in a string. Check out UpTop Solar String Sizing Tool that does this for you!
