

Solar Retrofit Home System

Overview

What is solar retrofit?

Solar retrofit is the process of upgrading existing solar energy systems to improve their efficiency, functionality, or capacity. This can involve modifications such as adding new solar panels, power optimisers or inverters to meet increased energy demands or enhance system performance.

Should you retrofit a solar energy system?

Let's say you've owned a solar energy system for several years, and over time, your energy needs have expanded. Whether you need more power to charge a new electric vehicle or because of increased home consumption (maybe you invested in a new heat pump), there are many reasons why people may want to retrofit an existing solar energy system.

Can I Retrofit my Home for solar heating?

Retrofitting your home for solar heating involves implementing energy-efficient solutions that leverage the power of sunlight to enhance heating systems and overall energy efficiency.

How much does it cost to retrofit a solar heating system?

The cost of retrofitting your home for solar heating can vary depending on factors such as the size of your home, the type and size of the system, and any additional equipment or modifications needed. On average, homeowners can expect to spend between \$8,000 to \$20,000 for a solar heating system installation.
