

# Solar air conditioning

## Overview

---

How does a solar air conditioner work?

A solar air conditioner combines solar electricity and air conditioning. In simple words, it takes energy from the Sun and uses it to power your AC to cool your space! A solar panel is a device that captures the power of the Sun. It converts the Sun rays into electrical energy. This energy can then be used directly or stored in a battery.

What is a solar air conditioner?

Solar air conditioners are solar-powered air conditioners designed to efficiently and effectively provide cooling to a room. Solar air conditioners use solar panels to power the air conditioner, and solar hotspot energy gives much power to the air conditioner's condenser and refrigerant.

How much does a solar air conditioner cost?

The exact amount depends on the number of air conditioners, the number of solar panels required, and a few other variables. Solar-powered air conditioners can cost \$2000 before installation while around \$5000 including installation. However in some cases, though, this can gain you a 26% tax credit to bring your costs down.

How efficient are solar-powered air conditioners?

As you explore options for solar-powered air conditioners, understanding power source efficiency is vital for making an informed decision. These units convert sunlight into electricity, which helps reduce energy costs. Pay close attention to the solar panel's efficiency, typically ranging from 15-22% for polycrystalline and monocrystalline panels.
